

AQUAFIL - DRYARN

A number of different brands has opted to utilize **Dryarn** by **Aquafil** for their garments, confident that they can count on the many outstanding performance features that distinguish this innovative new microfiber made from polypropylene. Dryarn is the lightest fiber that exists in nature; it has been dermatologically tested and is 100% recyclable, properties that render it ideal for a wide variety of applications and have made it possible to introduce into the category of high-tech clothing a whole new concept of comfort. **Slam**, a leader in clothing made for sailing enthusiasts, uses it thanks to its ability to transport water, perspiration and humidity to the outside of the fabric, leaving the garment lightweight and comfortable. It is also used by **Santini**, who specializes in high-tech clothing for cyclists. **Salewa** has also selected it for his Base Layer Alpineskin line because it provides lightness, breathability and heat-regulation. And it has also been applied in different ways by manufacturers of motorcycle gear, by such brands as **Ducati**, **Alpinestar**, **Held**, **Befast** and **Ufoplast**, to name just a few. In addition, Dryarn has been selected thanks to its outstanding performance features by Marco Olmo, one of the best ultra-marathon runners in the world, who came in second in the Grand Raid Sahara 2010 event. Recently this remarkable fiber was used for the first time in a fashion collection created by **Endurance**, featuring casual items in microfiber for men that combine style and extreme comfort.

* De nombreuses marques choisissent la fibre **Dryarn** d'**Aquafil** pour leurs articles d'habillement sportif et non, certaines de pouvoir compter sur les performances élevées qui distinguent cette microfibre novatrice en polypropylène. Le Dryarn est la fibre la plus légère existant dans la nature. Il s'agit d'une fibre testée dermatologiquement et recyclable à 100%, caractéristiques qui en font un produit idéal pour différentes applications et qui ont permis d'introduire dans l'habillement technique un nouveau concept de confort.
